

PATCH 57.1.2

Scheduled to be released to the field, Wednesday, May 18, 2005 at 4:00 P.M. CST

Database changes.

REPAIRS

PR/CRT NBR	REPAIR	Initiated By	Critical Function
Remedy 22752	Summary: Some of the RPA notifications are showing multiple times due to the fact that there can be multiple comments per notification. Resolution: Made further modifications to Civilian Inbox and underlying view to show only one notification regardless of number of comments. Multiple comments can be created when a notification is reassigned using the Fed Workflow Inbox. Since the Civilian Inbox can only show one comment, it will show only the latest of these comments. Also, when the FPJ comments migration script was re-ran in 57.1.1, it created duplicate rows in work flow comments where users had recreated comments after FPJ but prior to 57.1.1. A cleanup script has been created to remove the duplicate items. These duplicate rows account for most of the rows seen as duplicates in the inbox. Process log name is 'R22752'.	AF	In Box
