

PATCH 52.20.1

Scheduled to be released to the field, Wednesday, May 12, 2004 at 12:00 P.M. CST

Database load changes only.

TABLE UPDATES

CRT #	Description	Initiated By	Table
16726	<p>Summary: Passing the wrong Org Structure Code to Pay500.</p> <p>Resolution: See Parts 1 and 2 in Patch 52.18</p> <p>Part 3: This is a further regeneration of intervening actions. The original script was regenerating the intervening 500s using the correct salary fields but the locality percentage remained as the first 11-Jan-2004 Locality Percentage rather than the new Locality Percentage as a result of the retro. This script looks for regeneration locality percentages that differ with the actual locality percentages as of the effective date of the regenerated NOA. If differences are found, Pay500s are being regenerated with correct locality percentages. Additional Information: The Process Log Name is: PAY500_LOC_PCT_REGEN. The process log will contain 4 lines: START: shows the Date and Time the script started FINISH: shows the Date and Time the script finished REGENERATED: shows the SSAN, NOA, Effective Date of the Pay500s regenerated MANUAL REVIEW: shows the SSAN and the reason why the Pay500 was not generated.</p> <p><i>Manual Review -- NOA is excluded</i> <i>Manual Review -- Multiple PA Requests for given effective date</i> <i>Manual Review -- NOA has been cancelled or NOA has been corrected since regeneration</i> <i>Manual Review -- Locality percentage is correct</i></p>	EOP	Position

Explanation of the Process Log Message under 'Manual review':

NOA is excluded: Additional NOAs were identified that do not need to be regenerated and sent to payroll. The NOAs '301', '302', '303', '317', '330', '352', '355', '357', '815', '816', '840', '841', '842', '843', '846', '847', '881', '882', '894' Pay500 records regenerated between 21-Apr and 30-Apr will be excluded from this regeneration. **No further action is required by personnel.**

Multiple PA Requests for given effective date: These records contained more than 1 Pay500 generated for the same NOA and effective date. This script was unable to determine which Pay500 should be regenerated. **Further action is required by personnel. Personnel should review the Pay500s in DCPDS and determine which, if any, needs to be regenerated. Personnel should then regenerate that Pay500, correcting appropriate fields in the Pay500 before regenerating.**

NOA has been cancelled or NOA has been corrected since regeneration: A cancellation Pay500 to that particular NOA is being reflected OR a correction Pay500 has been generated for that particular NOA since Patch 52.18. **Further action is required by personnel. Personnel should review the Pay500s in DCPDS and determine which, if any, needs to be regenerated. Personnel should then regenerate that Pay500, correcting appropriate fields in the Pay500 before regenerating.**

Locality percentage is correct: Pay500s reflect that locality percentage would not have changed (i.e. geographic locations are not entitled to locality so locality percentage would have flowed as zeroes). **No further action is required by personnel.**
