REPAIRS

PROBLEM REPORT NUMBER	REPAIR	Initiated By	Critical Function
TD8747	Summary: Missing Academic Discipline codes 004907 and 004908. Resolution: Removed end_date from Academic Discipline codes. (lookup_type 'GHR_US_ACADEMIC_DISCIPLINE' where lookup codes like '004907','004908')	CPMS	Other

	<p>Summary: Blank Duty Station on assignment, position and pay500.</p> <p>Resolution: (1). This script finds assignments with null location ids and populates them by finding the most recent date-tracked assignment row with a location id and using that location_id. It then updates any RPAs (and shadow) with missing duty station location id for that person during the timeframe of the date-tracked assignment record. Copying the location id from the previous date-tracked assignment row has been deemed safe, since actions that actually moved someone to a new position were not exhibiting the problem with null locations. (2). Pay 500 regeneration will take place for the following NOAs '292', '460', 'C5E', 'FHB', 'GBB', 'JAR', 'JEK', 'JEJ', 'JQN', 'S1B', 'S1F', '800' To be selected for regeneration, the existing Pay 500 transaction must have been created on or after 21-DEC-2003 and contain a blank GEOLOC. The GEOLOC and LOCALITY PCT will be populated in the regenerated transaction. Process log entries will be created.</p>		
Remedy 15754	<p>They can be reviewed by querying the program: R15754_REGEN. In addition, Pay 500 regeneration will take place for NOA '894'. To be selected for regeneration, the RPA must be for Demo Location '3', the RPA effective date must be 11-JAN-2004 and the GEOLOC must be blank. The GEOLOC and LOCALITY PCT will be regenerated. Also, the RPAs will be modified for these 894s. They will have the correct value updated to the FROM LOCALITY AMOUNT. The print flag will also be set to allow for regular batch print to select the RPAs for printing. Process log entries will be created. They can be reviewed by querying the program: R15754_REGEN_DLC_3 regions 1, 6, 12, and 14 only.</p>	DLA	Other
